

Robospeker

The background features a dark blue gradient with several glowing blue hexagons of varying sizes and opacities. A network of thin, light blue lines connects various points, resembling a circuit board or a data network. Small, bright blue dots are scattered throughout the scene, adding to the futuristic aesthetic.

Introduction of team member

MY SELF GAURAV RAO AND MY FRIEND IKBAL HUSSAIN WE ARE
STUDENT OF BTECH CS (DS+ AI) (GROUP (13,14) WE ARE CREATING A
ROBOSPEKER

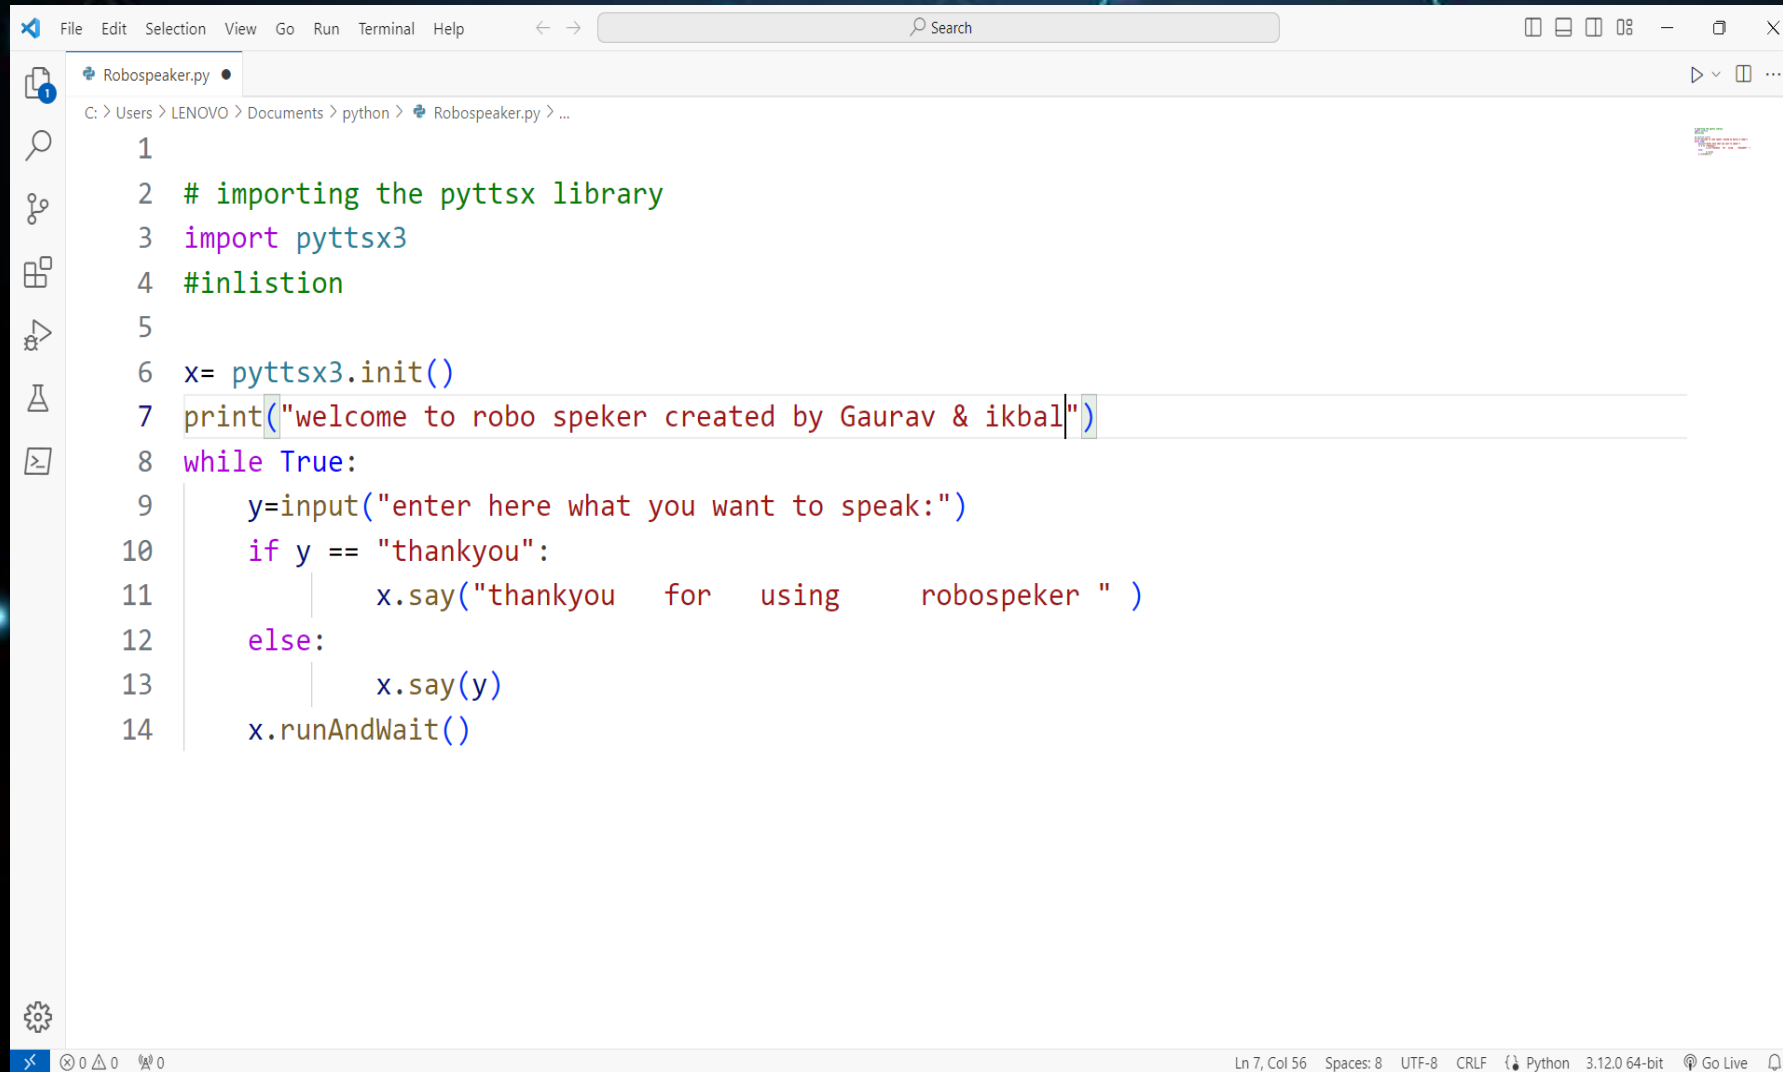

TECHNOLOGY USED

I USE PYTHON LIBRARY (PYTSEX) FOR CONVERT TEXT TO SPEECH
AND INFINITE LOOP

PROJECT

- I CHOOSE THIS PROJECT BECAUSE THIS IS FASHIONATIC AND ITS COVERNTS OUR ALL TEXTS TO SPEECH
- ANY PEPOLE CAN CONVERT OWN TEXT TO SPEECH THAT'S WHY I CHOOSE THIS PROJECT
- IN THIS ROBO SPEKER WE DON'T NEED TO RUN CODE AGAIN AND AGAIN YOU CAN CONVERT YOUR TEXT TO SPEECH

Code-:

The image shows a screenshot of a code editor window with the file name 'Robospeaker.py'. The code is a Python script that uses the 'pytttsx3' library for text-to-speech. It starts with a comment '# importing the pytttsx library', followed by 'import pytttsx3' and a placeholder comment '#inlistion'. The script initializes 'x' with 'pytttsx3.init()', prints a welcome message, and enters a 'while True' loop. Inside the loop, it prompts the user to enter text to speak. If the user enters 'thankyou', it says 'thankyou for using robospeker'. Otherwise, it says the user's input. The script ends with 'x.runAndWait()'. The editor interface includes a menu bar (File, Edit, Selection, View, Go, Run, Terminal, Help), a search bar, a sidebar with icons for Explorer, Search, Source Control, Run and Debug, and a Test Explorer, and a status bar at the bottom showing 'Ln 7, Col 56', 'Spaces: 8', 'UTF-8', 'CRLF', 'Python 3.12.0 64-bit', and 'Go Live'.

```
1
2 # importing the pytttsx library
3 import pytttsx3
4 #inlistion
5
6 x= pytttsx3.init()
7 print("welcome to robo speker created by Gaurav & ikbal")
8 while True:
9     y=input("enter here what you want to speak:")
10     if y == "thankyou":
11         x.say("thankyou for using robospeker ")
12     else:
13         x.say(y)
14     x.runAndWait()
```

Thank You!
