

Robospeker

The background features a dark blue gradient with several glowing, semi-transparent blue hexagons of varying sizes. These hexagons are interconnected by a network of thin, white lines that resemble circuit traces or data paths. Small, bright blue dots are scattered throughout the scene, some at the intersections of the lines and others floating independently, creating a futuristic, high-tech aesthetic.

Introduction of team member

MY SELF GAURAV RAO AND MY FRIEND IKBAL HUSSAIN WE ARE
STUDENT OF BTECH CS (DS+ AI) (GROUP (13,14) WE ARE CREATING A
ROBOSPEKER

TECHNOLOGY USED

The background features a dark blue gradient with several glowing blue hexagons of varying sizes and opacities. A network of thin, light blue lines connects various points, resembling a circuit or data flow. Small, bright blue dots are scattered throughout the scene, adding to the technological aesthetic.

I USE PYTHON LIBRARY (PYTSEX) FOR CONVERT TEXT TO SPEECH
AND INFINITE LOOP

PROJECT

- I CHOOSE THIS PROJECT BECAUSE THIS IS FASHIONATIC AND ITS COVERNTS OUR ALL TEXTS TO SPEECH
- ANY PEPOLE CAN CONVERT OWN TEXT TO SPEECH THAT'S WHY I CHOOSE THIS PROJECT
- IN THIS ROBO SPEKER WE DON'T NEED TO RUN CODE AGAIN AND AGAIN YOU CAN CONVERT YOUR TEXT TO SPEECH

Code-:

```
1
2 # importing the pytttsx library
3 import pytttsx3
4 #inlistion
5
6 x= pytttsx3.init()
7 print("welcome to robo speker created by Gaurav & ikbal")
8 while True:
9     y=input("enter here what you want to speak:")
10     if y == "thankyou":
11         x.say("thankyou for using robospeker ")
12     else:
13         x.say(y)
14     x.runAndWait()
```

Thank You!
